

BLACKHAWK™

Advanced Inlet Filter Mat

Sediment control device designed to prevent street flooding while being easy to install and service.

Silt sacks have limited sediment storage capacity and can easily blind whereby causing street flooding. Blackhawk™ has a much higher sediment storage capacity because sediment is kept above the grate. It's unique design – vertically oriented coir fibers, scalloped edging, hi-flow holes, and emergency dewatering plugs, make this device the most robust in it's class.

Blackhawk™ is held to the grate with high strength rubberized magnets so installation, servicing, and removal is a snap – no skid steer or backhoe needed. This device can be cleaned and re-used multiple times.

Performance Details:

- 1300 GPM hydraulic flow rating (2x4 grate version)
- Removes 99% .425 mm particle size and larger
- Independent testing shows 87% overall sediment removal
- Works with both Type-M and Type-C inlet configurations
- Mats for 2x2, 2x3, and 2x4 grates are in stock
- Custom sizes available with short lead-times

Other Benefits:

- Easy to handle - Installs by just laying on the grate
- Can be cleaned and re-used multiple times
- Can be used for both E&S and MS-4 compliance
- Much higher sediment storage capacity than bags
- Designed to be highly resistant to blinding and flooding
- Integrated emergency dewatering plugs
